EXPERIMENT 7

Aim: Extraction of APK file from android device.

Theory:

Android Debug Bridge (ADB) is a command-line utility included in the Android SDK that serves as a bridge for developers to interface with Android devices from a host computer. It enables both low-level and high-level operations, including device configuration, application debugging, and system maintenance. ADB operates over USB or TCP/IP, and consists of three components: the client (runs on the computer), the daemon (runs on the device), and the server (manages communication between the two). Developers use ADB not just for app deployment and testing, but also for direct access to log output via Logcat, performance profiling, and issuing shell commands in real-time. It's indispensable for Android development and device maintenance, especially when working with rooted or custom ROM environments.

ADB file extraction allows a user to transfer files from the internal storage of an Android device to a connected computer—particularly useful when direct access to the file system is limited or unavailable. The `adb pull` command is commonly used to extract files or directories, even from protected locations if root access is granted. For example, extracting app data from `/data/data/<package_name>` or copying logs and databases can be achieved effortlessly. It is a crucial capability in mobile forensics, security analysis, and disaster recovery, especially when dealing with data corruption, app crashes, or when a device screen is non-functional. Additionally, it supports automation in CI/CD pipelines for mobile apps by programmatically retrieving logs and test artifacts post-deployment.

Output:

1. adb install command

SHRI VILEPARLE KELAVANI MANDAL'S
DWARKADAS J. SANGHVI COLLEGE OF ENGINEERING
(Autonomous College Affiliated to the University of Mumbai)
NAAC ACCREDITED with "A" GRADE (CGPA : 3.18)

Name: Gargi Sukhatankar
Roll No: B027

SAP ID: 60019220125
Branch: CSE(ICB)

```
PS C:\Users\djsce.student\AndroidStudioProjects\11> adb install C:\Users\djsce.student\AndroidStudioProjects\11\app\build\outputs\apk\debug\app-debug.apk
Performing Streamed Install
Success
```

2. list packages using adb

Name: Gargi Sukhatankar
Roll No: B027

SAP ID: 60019220125
Branch: CSE(ICB)

```
PS C:\Users\djsce.student\AndroidStudioProjects\11> adb shell pm list packages f
package:com.android.musicfx
package:com.google.android.connectivity.resources.goldfish.overlay
package:com.android.carrierdefaultapp
package:com.android.emulator.radio.config
package:com.android.backupconfirm
package:com.android.nfc.auto_generated_rro_product__
package:com.google.android.safetycenter.resources
package:com.google.android.wifi.dialog
package:com.android.nfc
package:com.google.android.gsf
package:com.android.location.fused
package:com.google.android.wifi.resources
package:com.google.android.overlay.pixelconfigcommon
package:com.android.carrierconfig.auto_generated_rro_vendor__
package:com.google.android.nearby.halfsheet
package:com.google.android.federatedcompute
package:com.android.theme.font.otoserifsource
package:com.google.android.overlay.largescreenconfig
package:com.android.carrierconfig
package:com.android.systemui.emulation.pixel_fold
package:com.android.carrierconfig.auto_generated_rro_product__
```

3. pull packages using adb

```
PS C:\Users\djsce.student\AndroidStudioProjects\11> adb pull /product/app/YouTube/YouTube.apk
/product/app/YouTube/YouTube.apk: 1 file pulled, 0 skipped. 50.2 MB/s (127097754 bytes in 2.415s)
PS C:\Users\djsce.student\AndroidStudioProjects\11> adb pull /product/app/YouTube/YouTube.apk C:\Users\djsce.student\Documents\Devarsh
/product/app/YouTube/YouTube.apk: 1 file pulled, 0 skipped. 79.6 MB/s (127097754 bytes in 1.523s)
```

4. file pulled successfully

SHRI VILEPARLE KELAVANI MANDAL'S
DWARKADAS J. SANGHVI COLLEGE OF ENGINEERING
