EXPERIMENT 6

Aim: Prepare Gantt Chart for IPD project.

Theory:

A Gantt chart in software engineering is a powerful visual tool used to plan and track the progress of a project over time. It displays tasks or phases of the software development process on the vertical axis and time intervals on the horizontal axis. Each task is represented by a bar whose length corresponds to the duration of the task, allowing teams to see what needs to be done, who's responsible, and when things are scheduled to start and finish. It's essential for managing complex software projects, as it helps in allocating resources, identifying dependencies between tasks, and ensuring that milestones are met on time. Gantt charts make it easier for teams to stay organized and keep track of project deadlines, making it a vital tool in Agile, Waterfall, or any other development methodology.

Gantt Chart:

Conclusion:

Thus we successfully prepared a Gantt Chart for our IPD project.
