EXPERIMENT 8

Aim: Installing and setting up Docker desktop and NextCloud.

Theory:

Docker Desktop is an application that simplifies the use of Docker on Windows and Mac operating systems, enabling developers to easily build, run, and share containerized applications. It provides a graphical user interface (GUI) alongside the command-line interface (CLI) to manage Docker containers, images, networks, and volumes. Docker Desktop integrates seamlessly with the Docker Engine and Docker Hub, allowing developers to streamline the development and testing process by creating consistent environments across multiple systems. It also supports Kubernetes and Docker Compose, making it an essential tool for container orchestration and multi-container setups.

Nextcloud is an open-source self-hosted cloud storage platform that provides users with secure and private alternatives to commercial cloud services. It allows individuals and businesses to store, share, and sync files across devices while maintaining full control over their data. Nextcloud supports various collaboration features, such as file versioning, calendar integration, contact management, and video conferencing, making it a comprehensive solution for remote work and team collaboration. Its modular architecture and extensive plugin ecosystem further enhance its functionality, offering features like encryption, backup, and custom integrations.

Screenshots:

Step 1: Installing Docker Desktop

The screenshot shows the Docker Docs website. The main heading is "Install Docker Desktop on Windows". Below the heading, there is a section for "Docker Desktop terms" and a note about commercial use. The page contains two buttons: "Docker Desktop for Windows - x86_64" and "Docker Desktop for Windows - Arm (Beta)". There is also a section for "System requirements" with a tip about Hyper-V or WSL. The right sidebar shows a "Table of contents" with links to "System requirements", "Install Docker Desktop on Windows", "Install interactively", "Install from the command line", "Start Docker Desktop", and "Where to go next".

Step 4: Launching NextCloud

Conclusion: Thus we successfully installed and set up Docker desktop and NextCloud.
