EXPERIMENT 9

Aim: Platform as a Service using Google App Engine.

Theory:

Introduction to PaaS

Platform as a Service (PaaS) is a cloud computing model that provides a complete development and deployment environment without the complexity of managing infrastructure. PaaS solutions offer tools, frameworks, and services needed for application development, allowing developers to focus on writing code rather than handling servers, networking, and scaling.

Google App Engine (GAE) Overview

Google App Engine (GAE) is a PaaS solution provided by Google Cloud that enables developers to build, deploy, and manage applications in a fully managed environment. It abstracts infrastructure complexities, automatically handling scaling, security, and maintenance.

Key Features of Google App Engine

1. **Fully Managed Environment:** No need to manage servers, as Google automatically handles provisioning, scaling, and patching.
2. **Auto Scaling:** Dynamically adjusts resources based on traffic and load.
3. **Support for Multiple Languages:** Supports Python, Java, Node.js, Go, PHP, Ruby, and other languages.
4. **Built-in Security:** Integrated security features such as Identity and Access Management (IAM) and Google's firewall rules.
5. **Integrated Services:** Works seamlessly with other Google Cloud services like Cloud Datastore, Firestore, and BigQuery.
6. **Traffic Splitting:** Deploy multiple versions of an application and distribute traffic between them for A/B testing.

API Cloud Trace API

Sends application trace data to Cloud Trace for viewing. Trace d

Type: API

Speed up your search with these quick tips

- Press / to search from anywhere in the console
- Find 110 resource types and more by using the new filters on this page
- Find an API key by entering its key string in search
- Search for top AWS or Azure offerings and get suggestions for similar Google Cloud products. [Learn more](#)

Step 3:

The screenshot shows a GitHub repository interface. At the top, the repository name 'CloudLab' and owner 'rohini-bhosale' are displayed. Below this, there's a file list showing 'HelloWorld.java' with an 'Add files via upload' button. The main content area is the README section, which has a large 'Add a README' button. The right sidebar contains repository statistics: 'About' (no description), 'Activity' (0 stars, 1 watching, 0 forks), 'Releases' (no releases published), and 'Packages' (no packages published).

Conclusion:

Thus we successfully implemented Platform as a Service using Google App Engine.
